A Memo from the Trenches

August 2023

Memo from the Trenches

Quotes:

"It's tough to make predictions, especially about the future" – Yogi Berra

So, after 6 months of 2023....

One of the relentless challenges of being an active participant in the investment markets is trying to recognize my own propensity to confuse what I *want* from what I *expect*.

It seems that the consensus of investors is that we are waiting for what amounts to the most anticipated recession in recent memory and yet, it just isn't unfolding that way.

Let's review the business cycle. It starts with problems in supplying products, prices go up (inflation), interest rates increase because the demand for money to buy those products goes up and then the economy stalls as the cost of interest becomes punitive AND we are better rewarded for saving our money rather than spending it. Then economic activity declines (recession) and with that, interest rates follow. In fact, interest rates usually fall first anticipating this economic slowdown by a few months. In the meantime, unemployment goes up, profits decline, stock markets struggle, and we set up for the next cycle. And throughout this time, the "yield curve" – the difference between short-term interest rates and long-term rates - usually telegraphs to us the future changes in the economy.

Yet here we are with some powerful and conflicting data points and investment market responses. A significant jump in interest rates has stopped our inflation surge and though inflation rates are heading in the right direction, many economic data points are still on their merry way. New housing construction in Canada and the US is strong. Indeed, house prices in the lower mainland are basically unchanged – (although there has been a decline in Toronto real estate prices.) Who of my readers

would have imagined that mortgage rates could go from below 2% to above 6% in a year and have no apparent impact on house prices? Not I for one.

Unemployment remains quite low in the US and Canada. Corporate profits have weakened but have been resilient and the sentiment remains "constructive" on future profits.

What do I want? What do I expect? Put bluntly I would like to see this period over and done with. Let's get a short, modest recession quickly addressed and then get our interest rates moving lower and the start of the first inning of the next business cycle started. Is that what I want... or what I expect? I guess it is what I want because I have client portfolios positioned for "defense" now and I am crossing my fingers for the opportunity to go on "offense".... and I remain patiently waiting for that occasion.

For those interested in a little extra reading, a comment from Jamie McGeever on Reuters website from July 10th

https://www.reuters.com/markets/europe/elusive-us-recession-its-misleading-indicators-2023-07-10/?utm_source=Eloqua&utm_medium=email&utm_campaign=590162_NEWTDMNCCanadaTDNEWS&utm_content=MNCCA_TD_071123

Another reminder...

This spike in interest rates does have some positives. The return on a one-year term deposit from TD that I can now offer is now 5.5%. (Note: I cannot promise this rate to be available in a regular TD Canada Trust retail branch). On Aug 1st there is a bond from BMO that matures June 30th, 2024, that offers a yield of 5.7% AND that more than half that return would be taxed as capital gains rather than interest.

High Interest saving accounts... Series A version is paying 4.55%

RIF minimum withdrawals

This is a topic I have with clients from time to time. When to start RIF payments? This is an "insider" news article that discusses the fact that there are some internal industry and governmental policy makers reflecting on our current RIF withdrawal rules. Perhaps some changes in the future? We shall have to wait and see.

Inflation numbers.... WOW (in a good way)

In North America, US and Canadian inflation numbers are moderating exactly as we would hope to see. The June numbers for the US are now 3% and Canada's number came in at 2.8%. And finally, Europe is starting to see some inflation numbers that are encouraging although they appear to still be behind North America in their battle.

Today I was able to attend a seminar from one of TD Asset Management's more well-known portfolio managers, Damian Fernandes, and I put the question to him "... where do short-term and long-term interest rates settle out in 1 to 3 years?" He suggested that his opinion and thesis is short-term rates settle at about 3% and that 5 to 10-year interest rates settle at about 4.0% - 4.5%. For context we are about 5% and 4.0% respectively now. He also mentioned that at the beginning of this year he would have handicapped the possibility of a recession at about 50% BUT, he would not reduce that chance to 35% as of today.

US Model

July proved to be a very good month for the US model as value stocks seemed to fall into favor for the month. I would certainly like to see that momentum continue. Traditionally the US model has always been about high dividends from US stocks, from companies that you will know. It is a "value" approach. A defensive approach. A "no drama" approach. That said, the US Model has struggled over the last 6 to 12 months - having had a respectable 2022. The model posted a negative result in 2022 BUT, still managed to do better than most US benchmarks.

In the meantime, as you know from previous letters, 7 tech stocks in the US had been on a totally dominating run. (Microsoft, Amazon, Tesla etc.). Today, July 20th we are starting to see second quarter earnings reports being reported and today IBM and JNJ (which are in the model) had great results, resulting in material increases in share price. And though there have not been earnings reports today, Goldman Sachs and Amgen had a strong day as well.

Meanwhile, Tesla and Netflix had poor earnings reports resulting in meaningful declines in share price. And the other 5 high flying tech stocks took that as an opportunity to sell off in sympathy.

Is this a reversal of fortune for "value stocks" versus "growth stocks"? We shall see.

During the month we sold 3M and purchased JNJ. This did crystallize a loss for 3M but we have "booked" a lot of capital gains in the US model over the years and so I will use this opportunity for some tax planning for the future. We may well buy back 3M in the future. We cannot buy

the share back for 30 days for tax reasons. The dividend yield on the US model is currently 4%.

Fund Focus – the IA Clarington Floating Rate Income

This is a relatively recent addition to the funds I use. It is most often to be found in the TFSA "High Income" model. This group of investments in this model are focused on high interest income investment alternatives. This fund is invested in higher risk rated corporate bonds but ones that have very short periods until they mature and most importantly where the interest being paid is usually adjusted quarterly to current market interest rates (hence "floating rate"). Clearly an appropriate place to invest during a rising interest rate environment.

Here is a link for this interested in further research.

<https://iaclarington.com/price-performance/funds/fixed-income?wc=9944>

So that is it for July. Enjoy the summer. On occasion, please remind yourself to live for today. Eat, drink, and enjoy the company of friends and family during these glorious days.

Particular investment, tax, or trading strategies should be evaluated relative to each individual's objectives and risk tolerance.

Commissions, management fees and expenses all may be associated with mutual fund and/or exchange-traded fund ("ETF") investments (collectively, "the Funds"). Trailing commissions may be associated with mutual fund investments. ETF units are bought and sold at market price on a stock exchange and brokerage commissions will reduce returns. Please read the fund facts or summary documents and the prospectus, which contain detailed investment information, before investing in the Funds. The indicated rates of return (other than for money market funds) are the historical total returns for the period, compounded for mutual funds, including changes in unit value and reinvestment of distributions. The indicated rate of return for each money market fund is an annualized historical yield based on the seven-day period ended as indicated and annualized in the case of effective yield by compounding the seven day return and does not represent an actual one year return. Index returns do not represent ETF returns. The indicated rates of return do not take into account sales, redemption, commission charges, distribution or optional charges, as applicable, or income taxes payable by any securityholder that would have reduced returns. The Funds are not covered by the Canada Deposit Insurance Corporation or by any other government deposit insurer and are not guaranteed or insured. Their values change frequently. There can be no assurances that a money market fund will be able to maintain its net asset value per unit at a constant amount or that the full amount of your investment will be returned to you. Past performance may not be repeated.

Certain statements in this document may contain forward-looking statements ("FLS") that are predictive in nature and may include words such as "expects", "anticipates", "intends",

"believes", "estimates" and similar forward-looking expressions or negative versions thereof. FLS are based on current expectations and projections about future general economic, political and relevant market factors, such as interest and foreign exchange rates, equity and capital markets, the general business

environment, assuming no changes to tax or other laws or government regulation or catastrophic events. Expectations and projections about future events are inherently subject to risks and uncertainties, which may be unforeseeable. Such expectations and projections may be incorrect in the future. FLS are not guarantees of future performance. Actual events could differ materially from those expressed or implied in any FLS. A number of important factors including those factors set out above can contribute to these digressions. You should avoid placing any reliance on FLS.

Index returns are shown for comparative purposes only. Indexes are unmanaged and their returns do not include any sales charges or fees as such costs would lower performance. It is not possible to invest directly in an index
